## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kumar et al 2006/0239284 in view of Hassan-Ali et al 2004/0081167.

Re Claims 1, 9, Kumar teaches in fig. 1B a Edge switch 102 establishing plurality of SVC tunnels (at least one set of physical links for bearer traffic) wherein the edge switches are redundantly routed over the core [0026] and PNNI engine (call processing-related traffic) performs the signaling between the switches. Kumar fails to explicitly teach the “establishing priorities for said call processing –related traffic and said bearer traffic”. However, Hassan-Ali teaches in a queue manager 812 that provides information to the scheduler 822 to perform hierarchical scheduling to manage traffic shaping and flow routing [0061], wherein the scheduler is supported by priority queues. One skilled in the art would have been motivated to modify the Edge switch 102 to include priority queuing to support flow control. Hence, when flow in the SVC is needed, signaling cells can be priority queue to support flow control. Therefore, it would have been obvious to one ordinary skilled to combine the references.

Re Claims 2, 5, 7, 9, 11, 15, 17, 20 refer to Hassan wherein the ATM switch includes OAM signaling.

Art Unit: 2616

Re Claims 3, 12, 13, refer to Claim 1, wherein fig. 1B of Kumar supports ATM and voice.

Re Claims 4, 6, 14, 16, refer to Claim 1, wherein the tunnels are SVC and associated with COS.

Re Claims 8, 9, 18, 19, examiner takes offices the ATM standard provide AAL adaptation layer for IP, MPLS, hence, one skilled in the art would have be motivated to support VOIP application over ATM core.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

U.S. Patent Number 6549960 teaches implementing priority queue to support flow control.
